

ARTIFACT SHEET

Enter artifact number below. Artifact number is application number + artifact type code (see list below) + sequential letter (A, B, C. . .) The first artifact folder for an artifact type receives the letter A, the second B, etc. . . Example: 59 123 456 PA, 59 123 456 PB, 59 123 456 ZA, 59 123 456 ZB

09/589/788 7B

Indicate quantity of a single type of artifact received but not scanned. Create individual artifact folder/ box and artifact number for each Artifact Type.

The United States of America

The Commissioner of Patents and Trademarks

Has received an application for a patent for a new and useful invention. The title and description of the invention are enclosed. The requirements of law have been complied with, and it has been determined that a patent on the invention shall be granted under the law.

Therefore, this

United States Patent

Grants to the person(s) having title to this patent the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States of America or importing the invention into the United States of America for the term set forth below, subject to the payment of maintenance fees as provided by law.

If this application was filed prior to June 8, 1995, the term of this patent is the longer of seventeen years from the date of grant of this patent or twenty years from the earliest effective U.S. filing date of the application, subject to any statutory extension.

If this application was filed on or after June 8, 1995, the term of this patent is twenty years from the U.S. filing date, subject to any statutory extension. If the application contains a specific reference to an earlier filed application or applications under 35 U.S.C. 120, 121 or 365(c), the term of the patent is twenty years from the date on which the earliest application was filed, subject to any statutory extension.

Acting Commissioner of Patents and Trademarks

[57] ABSTRACT

A pet toy has an elongated hollow body extending along a longitudinal axis with first and second spaced bulbous sections, each having a side wall of substantially constant cross-section throughout. The first and second sections each include respective first and second openings defining respective first and second diameters. A center section has an inner surface forming a center opening of a third diameter which is less than at least one of the first and second diameters. The center section interconnects the first and second bulbous sections. A plurality of longitudinally spaced annular ribs extend around the periphery of the bulbous sections forming grooves to facilitate an animal gripping the toy with its teeth. At least one of the bulbous ends has an opening with a diameter greater than the diameter of the center section so that a knot of a pull rope extending through the center of the pet toy will pass through the opening in the bulbous section but will not pass through the center section. Edible food treats can be placed in the pet toy through the opening(s) in the respective bulbous sections and center section which can be removed by the pet biting down on the pet toy and deforming the side wall. When the teeth of the animal deform an end of the pet toy, the ribs deflect inwardly to clean the teeth and/or massage the gums. In a second embodiment, the pet toy has a hollow core of substantially constant cross-section.
